Abstract: FIELD: electronic game and service systems for local and wide area networks. SUBSTANCE: device has central computer station, peripheral computer station and their connection, data transmission network. Central computer station has systems for registration of players, servicing their accounts, information generation, storage and search, game situation back-up, detection of accounts at end of game, input of parlay information, execution game system, data exchange system. In addition device has electronic payment system, information protection system, secure information exchange system, game selection system, mail system. Data transmission network provides interface between peripheral and central stations for arbitrary types of peripheral systems and has communication station and data transmission network. EFFECT: secure wide-band network which provides possibility of confidential servicing users including money transfers between accounts using game base which includes several games. 10 cl, 3 dwg
